IN THE ABSTRACT:

Please amend the abstract of the disclosure as follows:

A voltage supply for a vehicle power amplifier having an audio property compensation function. The voltage supply includes means for setting the voltage supply to a first mode when its power is turned on, ~~and~~ means for setting the voltage supply to a second mode when its power is tuned on after setting on/off operation of compensation functions and associated adjustment values in the first mode and turning the power off, ~~wherein the~~ and a memory for storing information that determines either the first mode or the second mode when the device power is turned on. The first mode is to supply voltage only to a unit for setting the compensation functions and values, and the second mode is to supply power to the entire vehicle power amplifier.
